Hospital Management App

Features and Benefits

A connected solution for a hospital: HR, doctors, patients, appointments, prescriptions, lab, documents, pharmacy, billing and payments.

Employee, Attendance & Leave Management

Use HRMS HR as the foundation for staff records, attendance tracking and leave approvals.

Benefits

- Single employee master
- Reduced manual HR registers
- Clear leave visibility for duty planning

Operational impact

HR control
Duty planning
Audit trail

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Doctor Master

Doctors can be full-time employees or part-time consulting doctors.

Benefits

- Supports visiting consultants
- Links doctors to appointments and billing
- Reports by department and specialty

Operational impact

Doctor profiles
Consultant support
Cleaner reporting

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Consultant Contract Rules

Part-time doctor contracts can support hourly or case-based salary rules.

Benefits

- Flexible consultant pay model
- Case-based and hour-based tracking
- Scales without changing core workflows

Operational impact

Hourly pay
Case pay
Auditability

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Patient Master with Unique ID

Each patient has a unique permanent record with contact, demographic and clinical reference details.

Benefits

- Permanent visit history
- Unique patient ID reduces confusion
- Search by name, ID and mobile

Operational impact

Patient history
Unique ID
Faster search

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Mobile Number Based Family Lookup

Mobile number is the first booking field, while multiple family members can share one mobile number.

Benefits

- Works when patients forget IDs
- Family members appear in one dropdown
- Managers can edit linked mobile numbers

Operational impact

Mobile-first
Family-friendly
Controlled edits

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Website Appointment Booking

Patients can book appointments from the website by mobile number, patient selection, doctor and time.

Benefits

- Less front-desk phone workload
- New patient creation from website
- No retyping appointment data

Operational impact

Self booking
New patient flow
Less queue

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Doctor Availability Scheduling

Consulting doctors can define available slots that patients can view and book.

Benefits

- Patients see available times only
- Reduces double booking
- Ideal for visiting doctors

Operational impact

Live slots
Controlled schedule
Consultant timing

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Appointment Workflow

Appointments connect patient, doctor, date/time, status, reason, invoices, prescriptions and lab tests.

Benefits

- Complete visit trail
- Supports reception, doctor and billing teams
- Improves interdepartment coordination

Operational impact

One visit record
Status tracking
Department link

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Prescription Management

Prescriptions have a unique ID and link to the appointment. They can be entered digitally or uploaded as scans.

Benefits

- Digital prescription lines support billing
- Scanned prescriptions preserve records
- Easy lookup from appointment history

Operational impact

Prescription ID
Scan upload
Medicine link

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Lab Test Management

Internal and external tests are managed against patients and appointments, with parameter values and report uploads.

Benefits

- Built from the checkup pattern
- Internal and external reports together
- CT, ultrasound and outside reports can be scanned

Operational impact

Internal tests
External reports
Patient-linked

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Patient Document Repository

Legal documents, old medical records, scanned reports and other patient files can be stored against the patient.

Benefits

- One document vault per patient
- Supports medico-legal records
- Reduces paper dependency

Operational impact

Document vault
Old records
Legal support

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Invoice-Based Billing

Consultation, lab and pharmacy charges can be converted into HRMS customer invoices.

Benefits

- Connected to HRMS Accounting
- Clear receivables and payment status
- Consistent invoice format

Operational impact

Accounting link
Receivables
Payment status

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Pharmacy Billing Window

A dedicated pharmacy window can use inventory products and prescription lines for faster dispensing.

Benefits

- Faster pharmacy counter billing
- Medicine charges flow into invoices
- Less typing when prescriptions exist

Operational impact

Counter speed
Inventory link
Invoice flow

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Barcode, Lot and Expiry Tracking

Medicines can be barcoded and tracked by batch/lot, including different expiry dates for the same item.

Benefits

- Fast barcode-based billing
- Helps prevent expired-stock dispensing
- Handles multiple batches of same medicine

Operational impact

Barcode scan
Batch control
Expiry safety

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Online Payments Readiness

Invoices can connect to online payment flows such as UPI, net banking and configured HRMS payment providers.

Benefits

- Modern payment options
- Payments reconcile against invoices
- Better visibility of pending and paid bills

Operational impact

UPI ready
Net banking
Reconciliation

Designed for faster reception flow, connected clinical records, and cleaner billing control.

Role-Based Access & Operational Control

Reception, doctors, lab, pharmacy, billing and hospital managers can work with controlled access.

Benefits

- Sensitive data can be restricted
- Managers control key identifiers
- Safer multi-user operation

Operational impact

Security roles
Manager control
Safe operations

Designed for faster reception flow, connected clinical records, and cleaner billing control.
